

Manhattan SC52 & Como SC53

Aftersales Service

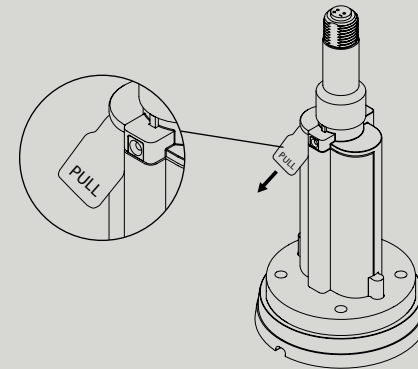

If you are unable to turn your lamp on, please check the following:

1. Make sure the lamp is fully charged. The small LED indicator on the bottom of the lamp will turn from red to green when fully charged.

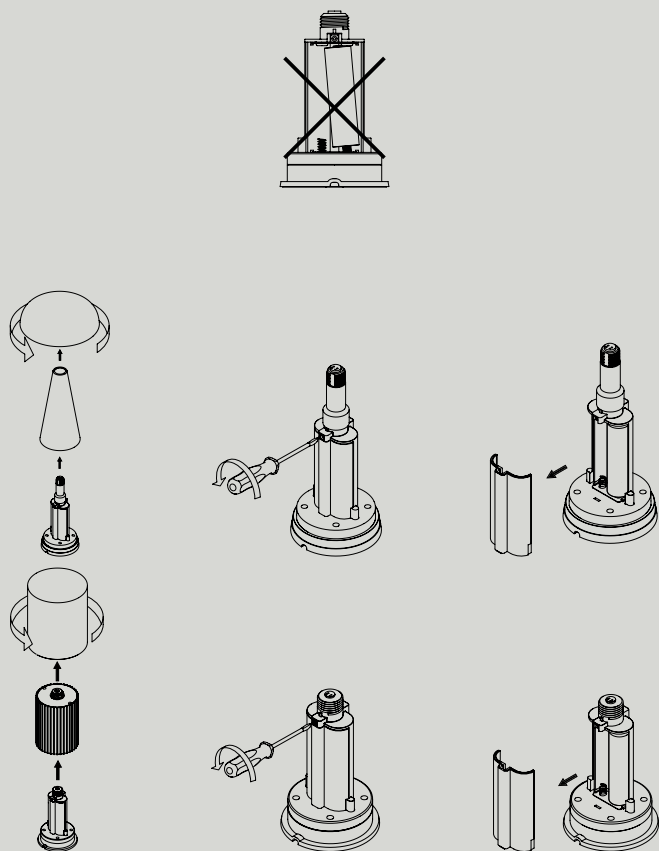

2. Make sure that the plastic slip has been removed.

3. Make sure the battery is not disconnected and is placed correctly in the battery holder.

If desired, two batteries can be installed to achieve longer operation time.

4. Make sure the LED light bulb is inserted correctly.

Fit the plus pole of the LED light bulb into the plus pole on the socket.
